1. Clinic ERP

An integrated clinic management platform that connects front office, doctors, nursing/vitals, pharmacy, laboratory, billing, HR and accounts in one workflow. It is suitable for clinics and multi-doctor outpatient centres that want to reduce paperwork and improve patient-service efficiency.

Patient & Appointment Management

- Patient registration and profile management
- Appointment scheduling and token/queue handling
- Doctor-wise schedules and appointment status
- Patient visit history for faster follow-up

Clinical Workflow

- Vitals entry before consultation
- Doctor consultation screen for diagnosis and clinical notes
- Prescription creation and medicine selection
- Lab investigation ordering from the consultation
- Access to previous visits, prescriptions and results

Pharmacy & Laboratory

- Pull prescriptions directly into pharmacy billing
- Medicine issue and pharmacy stock integration
- Receive and process laboratory orders
- Capture/update test results and maintain order status

Billing, Accounts & Administration

- Consultation, pharmacy and laboratory billing
- Cash/bank transaction support and accounting integration
- Management reports for revenue and operational activity
- User roles and access control
- HR-related operational support where configured

Business Benefit: Reduces duplicate entry between departments and provides a connected patient journey from appointment through consultation, lab/pharmacy and billing.

2. Billing & POS Software

A complete billing and point-of-sale solution for retail, wholesale and service-oriented businesses. It is designed for fast counter operations while maintaining inventory, customer, purchase, payment and financial information.

Sales & Billing

- Fast invoice generation and item search
- Barcode-based billing support
- Multiple payment/tender handling
- Sales returns and credit-note workflows

- Thermal-printer-friendly invoice output with business/GST details

Inventory & Purchase

- Item and category masters
- Purchase entry and supplier management
- Stock-in/stock-out control
- Batch-wise inventory where required
- Low-stock and inventory reporting

Customer & Business Control

- Customer and supplier ledgers
- Receipts, payments and outstanding tracking
- Salesperson/cashier-oriented operations
- Daily, monthly and period-based sales analysis
- Profitability and management reporting

POS Operations

- Shift opening and closing workflows
- Hold/resume billing
- Supervisor-controlled sensitive actions where configured
- Offer, voucher and loyalty workflows can be customized
- Multi-user and centralized database options

Business Benefit: Helps businesses speed up billing, maintain accurate stock, monitor collections and obtain clear sales and profitability information.

3. Pharmacy Billing Software

A pharmacy-focused billing and inventory application designed around medicine stock, batches, expiry dates, purchases and fast counter sales.

Medicine Billing

- Fast medicine search and billing
- Prescription-based sales workflow where integrated
- GST/tax-ready invoice structure
- Sales return handling

Batch & Expiry Management

- Batch-wise medicine stock
- Expiry-date tracking
- Near-expiry/expired-stock monitoring
- Purchase-rate and selling-rate management

Purchase & Inventory

- Supplier and purchase management

- Stock receipts and adjustments
- Reorder/low-stock monitoring
- Product-wise and batch-wise stock visibility

Reports & Control

- Daily and period sales reports
- Purchase and supplier reports
- Stock valuation and movement reports
- Expiry and low-stock reports
- Customer/supplier outstanding support where applicable

Business Benefit: Improves medicine-stock accuracy and helps pharmacies reduce expiry losses while maintaining faster and more controlled billing.

4. Van Sales Application

A field-sales and distribution solution for companies that sell and deliver products through vans or route-based sales teams. Mobile operations can be synchronized with a central business system.

Route & Customer Management

- Customer master and route allocation
- Daily route/visit planning
- Customer-wise pricing or terms where configured
- Customer balance and outstanding visibility

Mobile Sales

- Order entry and direct van-sales invoicing
- Product search and quantity entry
- Discount/tax calculation based on business rules
- Receipt/collection recording
- Mobile-friendly sales workflow

Van Inventory

- Van-wise stock loading
- Sales deduction from van inventory
- Return and stock reconciliation workflows
- Stock visibility for field staff

Management & Synchronization

- Centralized sales synchronization
- Salesman/route-wise performance reports
- Collection and outstanding reports
- Offline/online workflow options depending on deployment
- API integration with ERP/backend systems

Business Benefit: Provides better control over field sales, van inventory, collections and route performance while reducing manual end-of-day entry.

5. Custom Mobile App Development

Custom mobile applications developed around a customer's exact business process rather than forcing the business to adapt to a generic application. Solutions can target Android and iOS and connect to existing ERP, web or cloud systems.

Business Applications

- Sales, service, inventory and field-force apps
- Customer/self-service applications
- Approval and workflow applications
- Dashboard and management applications

Technical Capabilities

- Secure login and role-based access
- REST API/backend integration
- Push notifications and alerts
- Camera, document and device-feature integration where required
- Offline data capture and synchronization where suitable

Delivery & Support

- Requirement analysis and workflow design
- UI/UX implementation
- API and database integration
- Testing and deployment assistance
- Maintenance, upgrades and feature enhancements

Business Benefit: Best suited for businesses that need a mobile workflow tailored to their employees, customers, agents or field operations.

6. Custom Web Application Development

Secure, scalable web applications tailored to organization-specific processes. POSBUSS can develop complete new systems or modules that integrate with existing software and databases.

Application Types

- Custom ERP and management systems
- Customer/vendor/employee portals
- Business dashboards and reporting systems
- Workflow and approval applications
- Industry-specific web applications

Core Capabilities

- Responsive browser-based interfaces
- Role-based authentication and authorization
- API-driven architecture
- SQL/database integration
- Document, reporting and export functions
- Integration with third-party services where APIs are available

Cloud & Deployment

- Cloud-ready application architecture
- IIS/web-server deployment options
- Centralized data access for branches/users
- Backup and operational deployment planning
- Ongoing maintenance and enhancement

Business Benefit: Allows businesses to digitize unique processes that cannot be handled effectively by standard packaged software.

7. Cloud-Based Billing Software

A browser-accessible billing platform for businesses that want to access billing and management information from multiple locations without depending on a single local computer.

Cloud Billing

- Web-based sales billing
- Centralized item, customer and transaction data
- Access from authorized devices and locations
- Branch/user-oriented workflows where configured

Business Management

- Sales and purchase tracking
- Inventory visibility
- Customer/supplier management
- Receipts, payments and outstanding tracking
- Management dashboards and reports

Operational Benefits

- Centralized updates and data access
- Easier support for multi-location operations
- Role-based user access
- Backup and hosting options based on deployment plan
- Integration with mobile/web modules

Business Benefit: Suitable for growing businesses that need centralized access, easier multi-location management and reduced dependency on a single office PC.

Implementation & Support Services

Beyond software development, POSBUSS can support the complete implementation lifecycle so that the application fits the customer's actual business process.

- Requirement study and process understanding
- Software configuration and customization
- Master-data preparation and migration assistance
- User-role and access configuration
- Deployment and go-live assistance
- User training and operational handover
- Issue resolution, maintenance and version upgrades
- New reports, modules and feature enhancements as the business grows

Why Choose POSBUSS?

- Solutions designed around real business workflows rather than generic screens.
- One technology partner for billing, ERP, mobile, web and cloud requirements.
- Customization capability for industry-specific processes.
- Integration-focused approach for APIs, databases and existing applications.
- Continued support for enhancements as customer requirements evolve.

Your Business. Our Software. One Solution.
